

Commercial Washer Service Checklist

Max Appliance Repair Hamilton - Owner and Manager Guide 2026

Watch for these signs

1 Longer cycles or wet loads

Points to a heater, valve, or drain the machine is compensating for.

2 New noise or vibration

Grinding, knocking, or a walking machine means bearings or suspension.

3 Water on the floor

A door, hose, or pump leak that will only get worse.

4 Repeat error codes

Write the code down before you reset, then book service.

Keep to a schedule

1 Clean the pump filter monthly

Clears lint and coins before they strain the pump.

2 Inspect hoses and gaskets monthly

Catches leaks and cracks early.

3 Check bearings and belts quarterly

Stops a worn bearing from scoring the shaft.

4 Book a technician twice a year

Verifies motor, controls, and calibration under load.
